

CONNECT YOUR PHONE, TABLET OR LAPTOP DEVICE TO YOUR TV WITH A WIRE

If your devices or TV do not support wireless screen mirroring you may still be able to use a cable to achieve the same result.

How to connect:

Step 1: Depending on your device you will need one of the following:

- HDMI-to-HDMI cable (if your device has an HDMI output)
- Mini-HDMI-to-HDMI cable (if your device has a mini-HDMI output)
- MHL cable (if your device doesn't have an HDMI or mini-HDMI output)
- If you have an Apple device you may need the Apple Lightning Digital AV Adapter

Step 2: Once you have the necessary cable, simply connect your device to the TV, taking note of which input you have used on the TV.

Step 3: On your TV remote, select Input – Source and then choose the input that you connected your device to. Once you have done this your device's screen will now be mirrored to the TV.
